I am a senior at Syracuse University finishing a Computer Science degree at the Engineering & Computer Science college. During my time in Syracuse, I had the chance to learn and develop skills in the programming world, which led me to create interests in Data Analytics, Data Science, Machine Learning, Artificial Intelligence, and Front-End Programming.

I interned at Corning Incorporated in the summer of 2022 in a data analyst role. It was a unique experience because each intern had a task related to their specific background of studies. In my case, I was able to bring my programming skills and combine them with Data Analysis and Finance skills to successfully create a dynamic dashboard in Power BI.

I am open to work! and actively looking for a company that could offer me a career that allows me to grow alongside the company.
